(54) Title: A DATA NETWORK, USER TERMINAL AND METHOD FOR PROVIDING RECOMMENDATIONS

(57) Abstract: The invention relates to an ad-hoc peer to peer network for providing recommendations. User terminals (100, 103) of the data network comprise a local database (115) with community reference information. A processor (111) determines if a communication with a second user terminal (103) is possible and if so, communication is established by a direct wireless link. Community preference information is exchanged between the two user terminals (100, 103) and the database (115) is updated accordingly by a database controller (113). The user terminal (100) also comprises a recommendation processor (117) which generates a recommendation based on the community preference information. The invention is particular applicable to small low cost terminals, such as mobile phones or wireless equipped Personal Digital Assistants.
